DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 29-36, 38-47, 50, and 51, drawn to methods of using a composition, classified in class 47, subclasses 58.1 SC, 58.1SE, and 58.1R.
- II. Claims 37, 48, and 49, drawn to a coated seed, classified in class 47, subclass 57.6.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process could be achieved with a powder mixture of an insecticide, fungicide, and nematocide with the insecticide controlling egg laying by insects and the powder acting as insulation that controls frost damage. Alternatively, the product could be used to feed fish.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3643

If Applicant elects Invention I as described above, Applicant is further required to elect among the following species.

This application contains claims directed to the following patentably distinct species of the claimed invention:

- Species I: A method of disrupting egg laying
- Species II: A method of controlling frost damage
- Species III: A method of treating seeds
- Species IV: A method of treating roots
- Species V: A method of treating soil

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the invention/species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR1.141. If claims are added after

Art Unit: 3643

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
